

Eigen Cheatsheet

```
// A simple quickref for Eigen. Add anything that's missing.  
// Main author: Keir Mierle
```

1. 包含头文件

```
#include <Eigen/Dense>
```

2. 矩阵、向量声明

2.1 矩阵声明

```
Matrix<double, 3, 3> A;           // Fixed rows and cols. Same as Matrix3d.  
Matrix<double, 3, Dynamic> B;     // Fixed rows, dynamic cols.  
Matrix<double, Dynamic, Dynamic> C; // Full dynamic. Same as MatrixXd.  
Matrix<double, 3, 3, RowMajor> E; // Row major; default is column-major.  
Matrix3f P, Q, R;                // 3x3 float matrix.
```

2.2 向量声明

```
Vector3f x, y, z;                // 3x1 float matrix.  
RowVector3f a, b, c;             // 1x3 float matrix.  
VectorXd v;                      // Dynamic column vector of doubles  
double s;
```

3. 基础操作

3.1 计算大小

```
// Basic usage  
// Eigen          // Matlab          // comments  
x.size()          // length(x)       // vector size  
C.rows()          // size(C,1)        // number of rows  
C.cols()          // size(C,2)        // number of columns
```

3.2 访问元素

```
x(i)           // x(i+1)           // Matlab is 1-based
C(i,j)         // C(i+1,j+1)       //
```

3.3 改变大小

```
A.resize(4, 4); // Runtime error if assertions are on.
B.resize(4, 9); // Runtime error if assertions are on.
A.resize(3, 3); // Ok; size didn't change.
B.resize(3, 9); // Ok; only dynamic cols changed.
```

3.4 矩阵赋值

```
A << 1, 2, 3, // Initialize A. The elements can also be
      4, 5, 6, // matrices, which are stacked along cols
      7, 8, 9; // and then the rows are stacked.
B << A, A, A; // B is three horizontally stacked A's.
A.fill(10);   // Fill A with all 10's.
```

4. 特殊矩阵

// Eigen	// Matlab	
MatrixXd::Identity(rows,cols)	// eye(rows,cols)	
C.setIdentity(rows,cols)	// C = eye(rows,cols)	
MatrixXd::Zero(rows,cols)	// zeros(rows,cols)	
C.setZero(rows,cols)	// C = zeros(rows,cols)	
MatrixXd::Ones(rows,cols)	// ones(rows,cols)	
C.setOnes(rows,cols)	// C = ones(rows,cols)	
MatrixXd::Random(rows,cols)	// rand(rows,cols)*2-1	// MatrixXd::Randc
C.setRandom(rows,cols)	// C = rand(rows,cols)*2-1	
VectorXd::LinSpaced(size,low,high)	// linspace(low,high,size)'	
v.setLinSpaced(size,low,high)	// v = linspace(low,high,size)'	
VectorXd::LinSpaced(((hi-low)/step)+1,	// low:step:hi	
low,low+step*(size-1))	//	

5. 矩阵元素提取与替换

```

// Matrix slicing and blocks. All expressions listed here are read/write.
// Templated size versions are faster. Note that Matlab is 1-based (a size N
// vector is x(1)..x(N)).
/*****
/*          PLEASE HELP US IMPROVING THIS SECTION          */
/* Eigen 3.4 supports a much improved API for sub-matrices, including, */
/* slicing and indexing from arrays:                                */
/* http://eigen.tuxfamily.org/dox-devel/group\_\_TutorialSlicingIndexing.html */
*****/
// Eigen          // Matlab
x.head(n)         // x(1:n)
x.head<n>()        // x(1:n)
x.tail(n)         // x(end - n + 1: end)
x.tail<n>()        // x(end - n + 1: end)
x.segment(i, n)    // x(i+1 : i+n)
x.segment<n>(i)     // x(i+1 : i+n)
P.block(i, j, rows, cols) // P(i+1 : i+rows, j+1 : j+cols)
P.block<rows, cols>(i, j) // P(i+1 : i+rows, j+1 : j+cols)
P.row(i)           // P(i+1, :)
P.col(j)           // P(:, j+1)
P.leftCols<cols>() // P(:, 1:cols)
P.leftCols(cols)   // P(:, 1:cols)
P.middleCols<cols>(j) // P(:, j+1:j+cols)
P.middleCols(j, cols) // P(:, j+1:j+cols)
P.rightCols<cols>() // P(:, end-cols+1:end)
P.rightCols(cols)   // P(:, end-cols+1:end)
P.topRows<rows>()    // P(1:rows, :)
P.topRows(rows)      // P(1:rows, :)
P.middleRows<rows>(i) // P(i+1:i+rows, :)
P.middleRows(i, rows) // P(i+1:i+rows, :)
P.bottomRows<rows>() // P(end-rows+1:end, :)
P.bottomRows(rows)   // P(end-rows+1:end, :)
P.topLeftCorner(rows, cols) // P(1:rows, 1:cols)
P.topRightCorner(rows, cols) // P(1:rows, end-cols+1:end)
P.bottomLeftCorner(rows, cols) // P(end-rows+1:end, 1:cols)
P.bottomRightCorner(rows, cols) // P(end-rows+1:end, end-cols+1:end)
P.topLeftCorner<rows,cols>() // P(1:rows, 1:cols)
P.topRightCorner<rows,cols>() // P(1:rows, end-cols+1:end)
P.bottomLeftCorner<rows,cols>() // P(end-rows+1:end, 1:cols)
P.bottomRightCorner<rows,cols>() // P(end-rows+1:end, end-cols+1:end)

// Of particular note is Eigen's swap function which is highly optimized.
// Eigen          // Matlab
R.row(i) = P.col(j); // R(i, :) = P(:, j)
R.col(j1).swap(mat1.col(j2)); // R(:, [j1 j2]) = R(:, [j2, j1])

```

6. 矩阵操作

6.1 转置与旋转

```
// Views, transpose, etc;
/*****
/*
/*      PLEASE HELP US IMPROVING THIS SECTION      */
/* Eigen 3.4 supports a new API for reshaping:      */
/* http://eigen.tuxfamily.org/dox-devel/group\_\_TutorialReshape.html */
*****/
// Eigen          // Matlab
R.adjoint()        // R'
R.transpose()      // R.' or conj(R')           // Read-write
R.diagonal()       // diag(R)                   // Read-write
x.asDiagonal()     // diag(x)
R.transpose().colwise().reverse() // rot90(R)           // Read-write
R.rowwise().reverse() // fliplr(R)
R.colwise().reverse() // flipud(R)
R.replicate(i,j)    // repmat(P,i,j)
```

6.2 矩阵运算

6.2.1 基本算数运算

```
// All the same as Matlab, but matlab doesn't have *= style operators.
// Matrix-vector.  Matrix-matrix.  Matrix-scalar.
y  = M*x;          R  = P*Q;          R  = P*s;
a  = b*M;          R  = P - Q;        R  = s*P;
a  *= M;           R  = P + Q;        R  = P/s;
                        R  *= Q;        R  = s*P;
                        R  += Q;        R  *= s;
                        R  -= Q;        R  /= s;
```

6.2.2 点运算

```

// Vectorized operations on each element independently
// Eigen                                // Matlab
R = P.cwiseProduct(Q);                // R = P .* Q
R = P.array() * s.array();            // R = P .* s
R = P.cwiseQuotient(Q);                // R = P ./ Q
R = P.array() / Q.array();            // R = P ./ Q
R = P.array() + s.array();            // R = P + s
R = P.array() - s.array();            // R = P - s
R.array() += s;                       // R = R + s
R.array() -= s;                       // R = R - s
R.array() < Q.array();                // R < Q
R.array() <= Q.array();               // R <= Q
R.cwiseInverse();                     // 1 ./ P
R.array().inverse();                 // 1 ./ P
R.array().sin()                      // sin(P)
R.array().cos()                      // cos(P)
R.array().pow(s)                     // P .^ s
R.array().square()                   // P .^ 2
R.array().cube()                     // P .^ 3
R.cwiseSqrt()                        // sqrt(P)
R.array().sqrt()                     // sqrt(P)
R.array().exp()                      // exp(P)
R.array().log()                      // log(P)
R.cwiseMax(P)                        // max(R, P)
R.array().max(P.array())              // max(R, P)
R.cwiseMin(P)                        // min(R, P)
R.array().min(P.array())              // min(R, P)
R.cwiseAbs()                         // abs(P)
R.array().abs()                      // abs(P)
R.cwiseAbs2()                        // abs(P.^2)
R.array().abs2()                     // abs(P.^2)
(R.array() < s).select(P,Q );         // (R < s ? P : Q)
R = (Q.array()==0).select(P,R)        // R(Q==0) = P(Q==0)
R = P.unaryExpr(ptr_fun(func))        // R = arrayfun(func, P)    // with: scalar func(const scalar &x);

```

6.2.3 矩阵函数

```

// Reductions.
int r, c;
// Eigen                                // Matlab
R.minCoeff()                          // min(R(:))
R.maxCoeff()                          // max(R(:))
s = R.minCoeff(&r, &c)                // [s, i] = min(R(:)); [r, c] = ind2sub(size(R), i);
s = R.maxCoeff(&r, &c)                // [s, i] = max(R(:)); [r, c] = ind2sub(size(R), i);
R.sum()                              // sum(R(:))
R.colwise().sum()                    // sum(R)
R.rowwise().sum()                    // sum(R, 2) or sum(R')'
R.prod()                            // prod(R(:))
R.colwise().prod()                  // prod(R)
R.rowwise().prod()                  // prod(R, 2) or prod(R')'
R.trace()                          // trace(R)
R.all()                            // all(R(:))
R.colwise().all()                  // all(R)
R.rowwise().all()                  // all(R, 2)
R.any()                            // any(R(:))
R.colwise().any()                  // any(R)
R.rowwise().any()                  // any(R, 2)

// Dot products, norms, etc.
// Eigen                                // Matlab
x.norm()                            // norm(x).    Note that norm(R) doesn't work in Eigen.
x.squaredNorm()                    // dot(x, x)    Note the equivalence is not true for complex
x.dot(y)                          // dot(x, y)
x.cross(y)                        // cross(x, y) Requires #include <Eigen/Geometry>

```

6.2.4 类型转换

```

//// Type conversion
// Eigen                                // Matlab
A.cast<double>();                        // double(A)
A.cast<float>();                        // single(A)
A.cast<int>();                          // int32(A)
A.real();                              // real(A)
A.imag();                              // imag(A)
// if the original type equals destination type, no work is done

// Note that for most operations Eigen requires all operands to have the same type:
MatrixXf F = MatrixXf::Zero(3,3);
A += F;                                // illegal in Eigen. In Matlab A = A+F is allowed
A += F.cast<double>(); // F converted to double and then added (generally, conversion happens or

// Eigen can map existing memory into Eigen matrices.
float array[3];
Vector3f::Map(array).fill(10);          // create a temporary Map over array and sets entries
int data[4] = {1, 2, 3, 4};
Matrix2i mat2x2(data);                  // copies data into mat2x2
Matrix2i::Map(data) = 2*mat2x2;          // overwrite elements of data with 2*mat2x2
MatrixXi::Map(data, 2, 2) += mat2x2;     // adds mat2x2 to elements of data (alternative syntax

```

6.2.5 求解线性方程组

```

// Solve Ax = b. Result stored in x. Matlab: x = A \ b.
x = A.ldlt().solve(b); // A sym. p.s.d. #include <Eigen/Cholesky>
x = A.llt().solve(b);  // A sym. p.d.   #include <Eigen/Cholesky>
x = A.lu().solve(b);   // Stable and fast. #include <Eigen/LU>
x = A.qr().solve(b);   // No pivoting.   #include <Eigen/QR>
x = A.svd().solve(b);  // Stable, slowest. #include <Eigen/SVD>
// .ldlt() -> .matrixL() and .matrixD()
// .llt() -> .matrixL()
// .lu() -> .matrixL() and .matrixU()
// .qr() -> .matrixQ() and .matrixR()
// .svd() -> .matrixU(), .singularValues(), and .matrixV()

```

6.2.6 求解特征值

```

// Eigenvalue problems
// Eigen                                // Matlab
A.eigenvalues();                       // eig(A);
EigenSolver<Matrix3d> eig(A);          // [vec val] = eig(A)
eig.eigenvalues();                     // diag(val)
eig.eigenvectors();                   // vec
// For self-adjoint matrices use SelfAdjointEigenSolver<>

```
